

SYSTEM FOR PROVIDING INFORMATION TO INTENDING CONSUMERS

ABSTRACT

5 The product information distribution system (20) comprises:

a database (8) having records of user purchasable products, each of the records including fields for at least identification and geographical availability of a product,

an input means (15) for receiving input data from a user related to a preferred product which is selected from one of said product identification fields of said records, a
10 distance value and a preferred geographical location from which the preferred product is to be sourced,

searching means (7) for searching the database according to the input data and for determining a search result, the search result relating to those of the records including products meeting the product identification fields and available within a boundary
15 determined by the distance value of the preferred geographical location, and

an output display means (14) for displaying the search result to the user.
